

Will the broadcast flag interfere with consumers ability to make copies of DTV content for their personal use, either on personal video recorders or removable media?

The broadcast flag will interfere with my personal rights to make copies of DTV content and I resent this new infringement.

Would the digital flag interfere with consumers ability to send DTV content across networks, such as home digital networks connecting digital set top boxes, digital recorders, digital servers and digital display devices?

Yes. The digital flag will interfere with my abilities to send DTV content across varying networks...again, I resent this type of new restriction.

Would the broadcast flag requirement limit consumers ability to use their existing electronic equipment (equipment not built to look for the flag) or make it difficult to use older components with new equipment that is compliant with the broadcast flag standard?

Yes. The broadcast flag will limit and make outdated my present existing electronic equipment. I resent this type of interference on the part of the FCC.

Would a broadcast flag requirement limit the development of future equipment providing consumers with new options?

Yes. New equipment must be bought by consumers after this new mandate is instituted. I resent the waste and expense this will force on consumers.

What will be the cost impact, if any, that a broadcast flag requirement would have on consumer electronics equipment?

I resent having to buy new equipment. This is expensive and unfair. My present equipment is fine usable and should not be made obsolete by these new changes as a broadcast flag.

Other Comments:

No new regulations and/or changes to the broadcast format in this country shall be passed without the express knowledge of the public. All concerns must be listened to before any changes are considered. The FCC shall serve the public and not Hollywood.
